

## **Professor WANG, Chuan-Yue**

Dr. Wang's research mainly focuses on schizophrenia or psychoses. His team has made some progress in pharmacotherapy for schizophrenia. They reported a multi-center, randomized, controlled trial of risperidone maintenance treatment in schizophrenia. They carried out individualized clozapine treatment in patients with schizophrenia by population pharmacokinetic and pharmacodynamic model. They also proved that the herbal therapy could treat antipsychotic-induced hyperprolactinemia in individuals with schizophrenia. For recent years, they expanded their study into cognition, sensory gating and childhood trauma of schizophrenia and attenuated psychosis syndrome.
